EVERYTOWN COMMUNITY SAFETY FUND

Organizational Capacity Index

OCI Capacity Coach

Helping the groups who stop shootings in their neighborhoods grow stronger, with a clear plan they can start on Monday.

TEAM INTRODUCTION

Who we are

A

Ariel

Shows you the live demo

J

Johanna

Introduces the team and the need

B

Bo

Walks you through what we built and how it works

A

Atman

Shares what it changes, and our ask

We spent three days with Everytown's Community Safety Fund team. We listened first, built second, and then watched a first-time user try it with no help, and fixed every place she got stuck.

SOLUTION OVERVIEW · THE NEED

The people who stop shootings need strong organizations, too

45

local groups took Everytown's capacity check-up last year

2

Everytown staff wrote every one of their reports by hand

140+

groups in Everytown's network who need the same help

Who they are

Community violence intervention groups: neighbors who step in before violence happens. Most are small, 5 to 20 people, and many leaders have lived through violence or prison themselves.

"Out of the 10 things you could fix, here's one or two priorities that you should do first."

Everytown Community Safety Fund team, in our interview

Sources: Everytown 2025 check-up findings; interview with the Community Safety Fund team

SOLUTION OVERVIEW · WHAT WE BUILT

A coach for every group, in three steps

1 Answer

Yes or No questions about how the group runs. About 15 minutes, in English or Spanish, on a phone or a computer.

2 Get a plan

In about a minute: a letter in plain words, the two things to start with, and a chat to ask questions.

3 Follow through

A 12-week plan, one week at a time, with badges along the way. In week 12, take it again and see what changed.

And for Everytown staff

One view of the whole network: which groups need which training, who asked for help, and which groups could learn from each other.

ARCHITECTURE · HOW IT WORKS BEHIND THE SCENES

Rules score. AI writes. Rules check.

RULES
1 Answers
The leader answers on our website.
Amazon CloudFront, Amazon S3

RULES
2 Scoring
Everytown's own scoring rules. No AI.
AWS Lambda

AI
3 Writing
Claude writes the plan, using 9 trusted field guides.
Claude on Amazon Bedrock, Knowledge Bases

RULES
4 Checking
Anything not tied to the group's own answers is removed.
Our code, Bedrock Guardrails

RESULT
5 The plan
On screen, as a PDF, or read aloud.
Amazon Polly

The filing cabinet
Answers and plans are stored safely, and only made-up groups for now.
Amazon Aurora

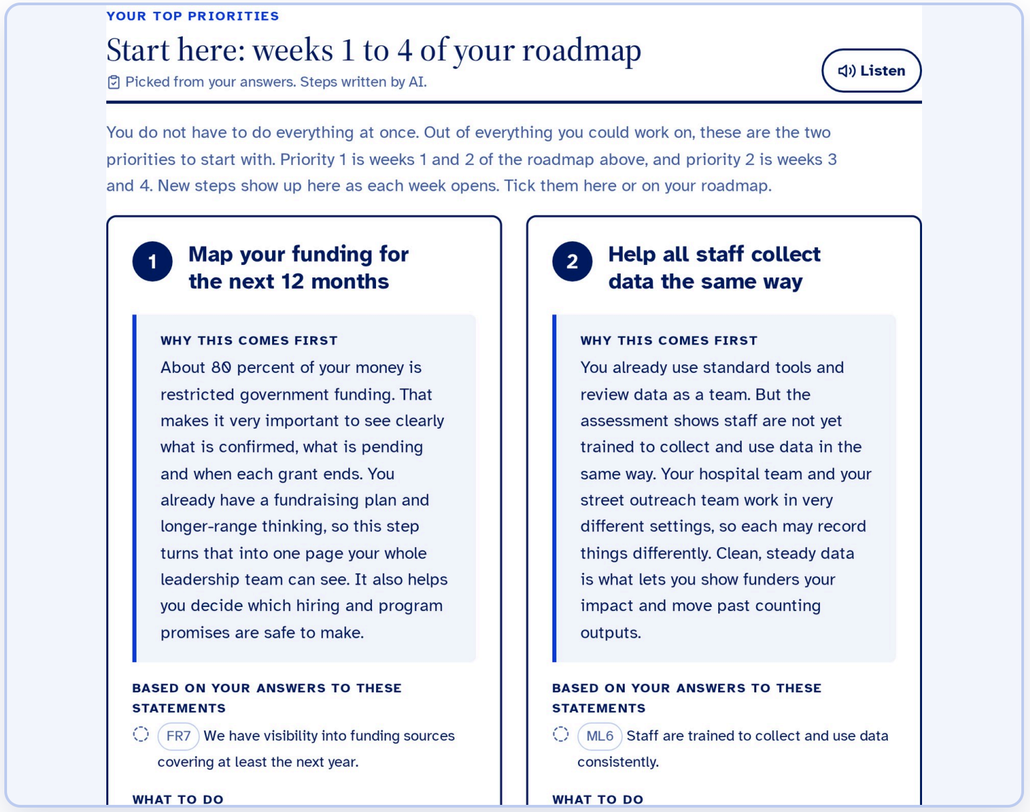

The flight recorder
Every step the AI takes is recorded, so staff can check it.
Amazon CloudWatch

Ready to hand over
One script sets it all up in Everytown's own Amazon account.
AWS CloudFormation

LIVE DEMO

Let's see it with a made-up group

1. **A group's answers, in one click.** Their report starts writing while we keep going.
2. **Their plan, in plain words.** Each part says where it came from: their answers, or written by AI.
3. **Asking the chat a question.**
4. **Their 12-week roadmap**, with badges for each week done.
5. **Everytown's view** of the whole network.

Made-up sample organizations only · if the internet fails, the backup slides at the end show the same screens

PROPOSED INDUSTRY IMPACT

What changes, for groups, for Everytown, and for the nonprofit field

For local groups

- A plan in about a minute, not a wait for staff to write one by hand
- Written for them: plain words, read aloud, Spanish, on a phone
- Small steps a team of five can really do

For Everytown

- Staff time moves from writing reports to coaching
- Training planned around what the network really needs
- A retake in week 12 shows whether support helped

For the nonprofit field

- Free and open: any funder that supports small nonprofits can use it
- About 11 cents per report; under $50 a year for 140 groups
- Grows from 45 groups to the whole network with no rebuild

AI cost measured on live reports; hosting a few dollars a month

OUR ASK

Try it with 3 to 4 grantees this quarter

- Everytown invites 3 to 4 groups to take it, about 15 minutes each.
- Staff go through each plan with the group and tell us what helped.
- Everytown's tech team sets it up in Everytown's own account, with real sign-in.

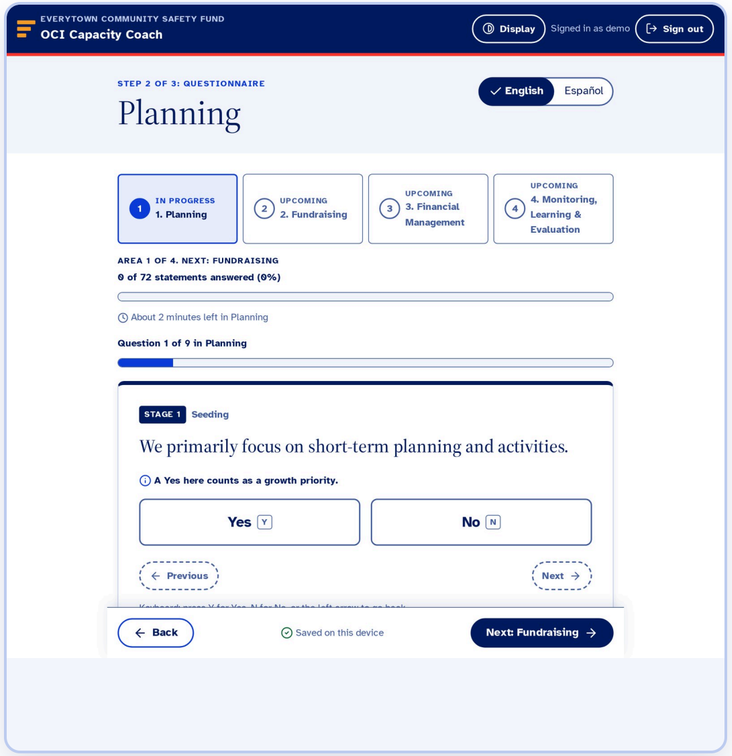

Thank you. Questions? · d2mi2h3eu8y69s.cloudfront.net

BACKUP · IF THE INTERNET FAILS

What a group's leader sees

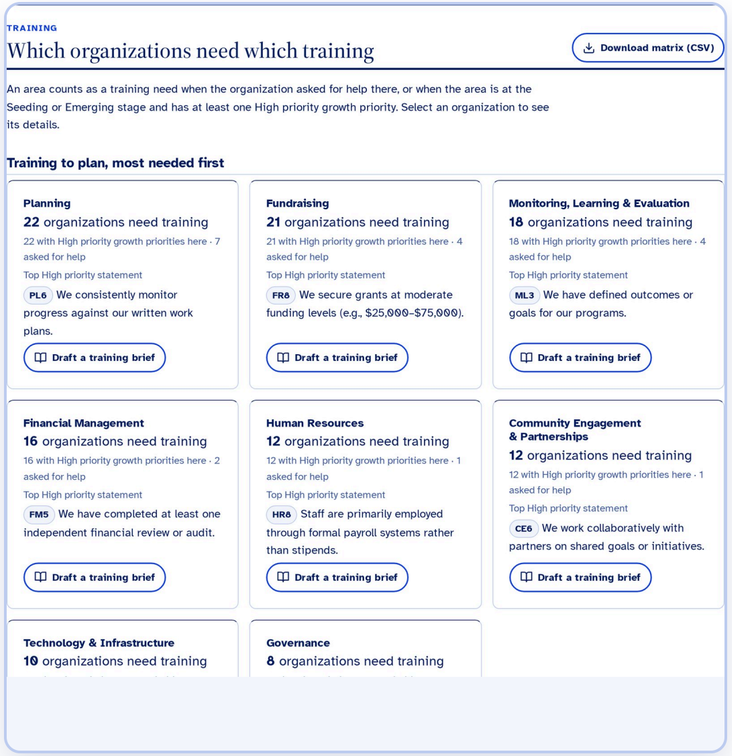

1 **Answer.** Yes or No, one question at a time, in English or Spanish.

2 **Start here.** The two things to do first, and the answers behind them.

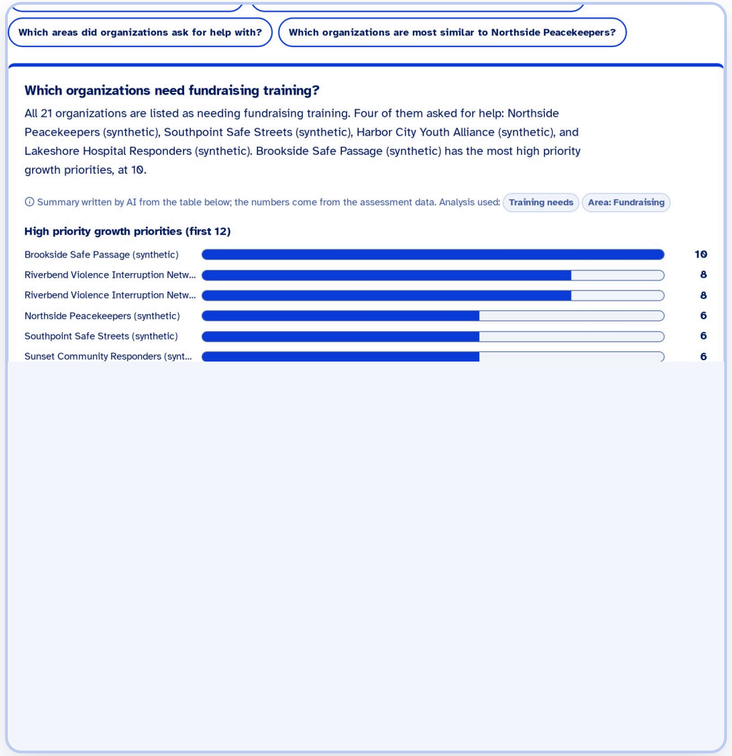

3 **Follow through.** 12 weeks, one at a time, with badges.

BACKUP · IF THE INTERNET FAILS

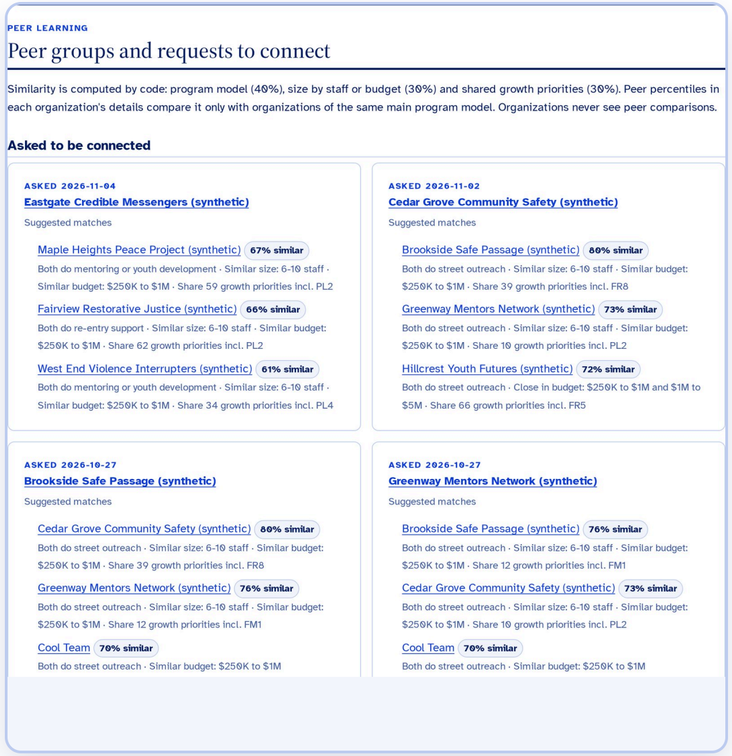

What Everytown staff see

Training needs. Who needs which training, and who asked for help.

Ask the data. A plain question; the numbers come straight from the data.

Peers. Groups facing the same challenges, to connect.

FOR QUESTIONS · SAFETY

Keeping the AI honest

Rules decide

- Every score and stage, using Everytown's own method
- Which one or two things come first
- Which links appear: only 19 trusted guides
- Every number Everytown staff see
- If someone writes about danger: 988 and 911, never the AI

The AI writes, then gets checked

- The plan, in plain words, and short chat answers
- Anything not tied to the group's answers is removed
- A safety filter screens what comes in
- Tested on 52 practice cases before every release
- Every step recorded, so staff can check it

Our practice cases caught 3 real problems before any group saw them; all fixed

FOR QUESTIONS · ACCESS

Written for the reader, not the funder

Easy to read
Every plan is checked to read at about an 8th grade level or plainer.

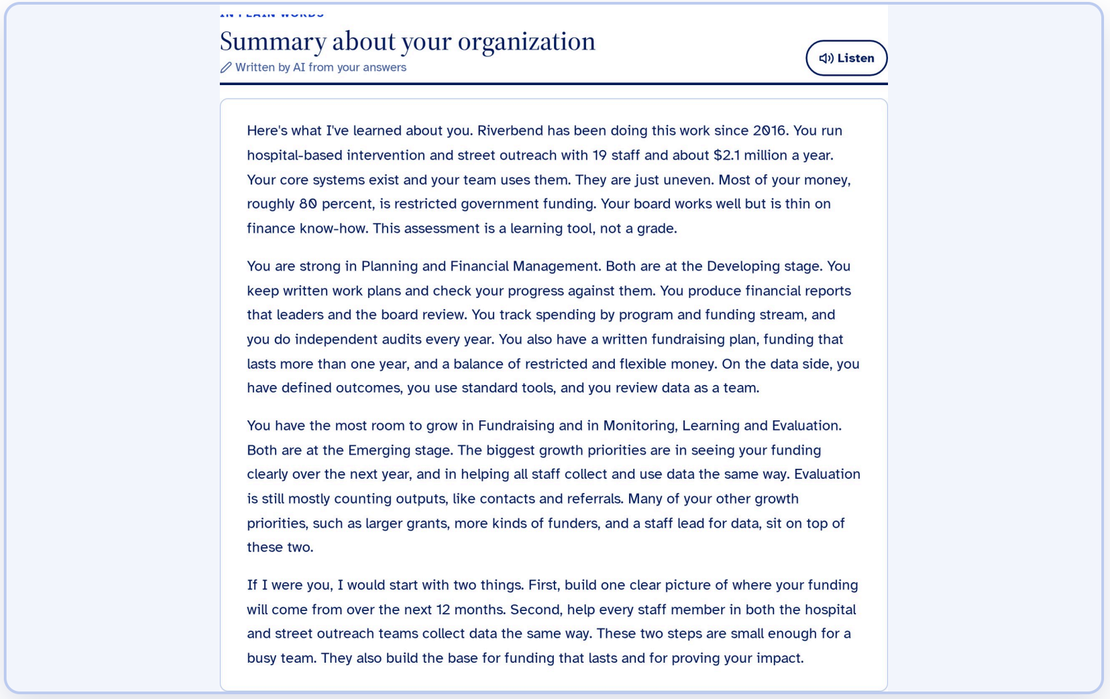

Strengths first
A letter from a coach, never a grade.

Read aloud
Any part can be played out loud.

English and Spanish
Questions, plan and PDF.

Phone first
Every screen tested on a phone and a computer.

For every ability
Larger text, high contrast, screen readers; meets the WCAG 2.2 AA standard.

Typeface: Atkinson Hyperlegible, designed for readers with low vision

FOR QUESTIONS · COST

Cheap enough to run for years

$0.11
of AI per report, measured on live reports

< $50
a year of AI for 140 groups, twice a year each

$1 to 3 / mo
to host when the database sleeps between uses

0
servers to look after: Amazon runs them

Today it is kept always on for judging, about $45 a month. Spending limits are built in: how many reports run at once, a cap per hour, and an optional monthly budget alert.

Costs from the live site, us-west-2

FOR QUESTIONS · PRIVACY

Built with real-world care, tested with made-up data

Data

Only made-up organizations today. Stored encrypted. People's names are never sent to the AI.

Groups stay separate

No group ever sees another group's answers. Everytown connects groups only when they ask.

Confidential PDFs

Every PDF carries an Everytown watermark and a note not to share it.

Before real groups use it

Real sign-in inside Everytown's Grantee Portal replaces today's practice logins, and Everytown sets how long records are kept.

FOR QUESTIONS · GROWTH

From 45 groups to the whole network, with no rebuild

100+
reports a minute that Amazon's AI service allows us today

1,000
requests at once that AWS allows; the demo is capped at 10 to control cost

Auto
the database grows and shrinks with use

2
languages today, English and Spanish

It gets more useful as it grows: every new check-up sharpens the training picture and the matches between similar groups.
